FLIGHT
PATH 737
ADVANCED PILOT TRAINER
The
MICRO
Selection
199
Selection

Flight Path 737 puts you into the pilot's seat of a high performance jet airliner! Six levels take you from learner to test pilot standard as you gradually pick up the skills required to take off and land from a hazardous mountain airport, with enough fuel for only one landing!

A split screen display provides the view from the cockpit - see the runway passing underneath as you take off, then the mountains looming up ahead - and a comprehensive instrument panel below. So get on the Flight Path right now!

As pilot you must face exercises of ever increasing difficulty. From learning the basics you will progress to coping with changing course headings and overcoming hazards like shortened runways, higher mountains, engine fires and unpredictable cross-winds.

Your control panel is full of instruments like altitude and airspeed indicators, artificial horizon - everything you need to get in the air, keep on course, and bring her down again safely!
